The List Builder is a platform designed to explore everything E³.series can offer. With this application the user saves hundreds of hours of development in just a few clicks.

In a simple and intuitive way, interfaces between the user and E³.series and can be used by any member of the production chain.

The user says what he needs from the electrical design and the List Builder searches the information, interprets and displays the answer in the desired format, in just a few seconds.

- Is able to fetch any attribute in the database;
- Allows you to create filters that enable to identify only the relevant information for the user;
- Allows you to create and save templates for configuration in external files from the software, so that other users can use them;
- Export reports to E³.series, Excel and Openoffice;
- Calculates the full budget of the project;

- Can group and account items with similar characteristics;
- Able to separate and organize items when it identifies a variation in a particular trait;
- Provides detailed, customized descriptions of all existing connections in the project;
- Generates reports with any existing attribute;
- Able to identify incomplete items which were used in the design.

Created and developed by
Cim-Team Latin America,
List Builder comes to the market
to improve the reporting ability
of E-CAE software.

Significantly raises engineering
productivity while considerably
reducing the time to generate
reports for an electrical project.

- Listing speed
- Design speed
- Information efficiency
